## FULL STACK SOFTWARE ENGINEER OPPORTUNITY AT AN AWARD WINNING PEOPLE CONSULTANCY UP TO £50,000 DOE

We're on a mission to show the world how engaged, happy people are central to business success. Recognised as an inspirational place to work, Purple Cubed are seeking an enthusiastic full stack software engineer with experience in ASP.Net (C#), SQL Server, cloud hosting (e.g. Azure/AWS) and modern client-side frameworks to help improve our award-winning web apps. Ideally you'll also bring an interest and experience in cutting edge technologies we're planning to make wider use of too (such as NodeJS and GraphQL).

We offer expertise and tools for well-known brands that want to improve business results and growth through harnessing the power of their people, positioning businesses as 'amazing places to work' (think Yo!, Hamleys, Virgin Active, The Ivy Collection and some of the world's best five star hotels...).

Working within the tech team, here's the deal:

- We'll give you freedom (within a framework); an exciting challenge and the opportunity to make a real contribution in a fast-paced environment from day one
- You'll help us grow the company
- We'll offer you support and progression towards your full potential as well as skills development, with your own L&D plan
- We'll welcome you into a great environment; we practice what we preach and live our values
- You'll stand out from the crowd, as: achievement focused, positive, self-sufficient, and determined

You'll be able to:

- Create brand new features, large and small, for [Talent Toolbox](#) and our other web apps
- Help recognise and make engineering improvements to ensure our product performs well and remains easy to maintain, and have a key input in our technical choices going forwards
- Be part of an agile team open to new ideas and technologies
- Have the option to work from home for part of the week

People love it here – so in return for working in this great environment, you'll:

- Have full stack experience in a .Net based web development role, using Visual Studio and SQL Server
- Understand and enjoy both frontend and backend development
- Have experience of using cloud providers like Azure/AWS
- Know how to get the right balance between using cutting edge technologies and battle-proven tech to help keep our production environments stable and performant
- Have an interest in JavaScript and client-side frameworks. Angular or React experience with ES6 would be ideal
- Be flexible, have excellent communication skills and enjoy working for a small business in a fast-paced environment

To apply you'll need to send 10 bullet point reasons why you're the one, plus a one-page CV to [emily@purplecubed.com](mailto:emily@purplecubed.com)
