

SENIOR QA ENGINEER OPPORTUNITY AT AN AWARD WINNING HR TECHNOLOGY COMPANY UP TO £45,000 DOE

We're on a mission to show the world how engaged, happy people are central to business success. Recognised as an inspirational place to work, Purple Cubed are seeking an enthusiastic Senior QA Engineer with a passion for delivering quality software with a brilliant user experience.

We're about to start work on an exciting new product, refreshing our business to reflect changing circumstances and are growing our technical team as a result. As the most senior QA role in the business, you'll be responsible for setting out and implementing the vision for software testing at Purple Cubed, and will report into the Technical Director.

Our tech stack is predominantly JavaScript and ASP.Net Core, with recent frontends built mostly with React (and some Vue). We run on Azure and use Azure DevOps for CI/CD. We have plenty of unit tests, but there's scope for a range of improvements and additions to our automated testing to help improve the quality we deliver. We use an agile sprint process, which you'll be able to impact and improve where necessary.

Working within the tech team, here's the deal:

- We'll give you freedom (within a framework); an exciting challenge and the opportunity to make a real contribution in a fast-paced environment from day one
- You'll help us grow the company by ensuring our tech products are of the highest quality
- We'll offer you support and progression towards your full potential as well as skills development, with your own L&D plan
- We'll welcome you into a great environment; we practice what we preach and live our values
- You'll stand out from the crowd, as: achievement focused, positive, self-sufficient, and determined

You'll be able to:

- Collaborate with the development team to help them deliver well tested, high quality software products
- Continually adapt the QA-related processes to ensure they hit the required standards whilst also being as efficient as possible
- Create test plans for new features and products, as well as changes to existing functionality
- Perform exploratory testing of new products and features, as well as bug fixes on existing products
- Be a key part of our agile team, always open to new ideas and technologies
- Work from home, although we're a collaborative team so would like to see you a couple of times a week as things start to return to 'normal'

People love it here – so in return for working in this great environment, you'll:

- Have a passion for keeping users happy by delivering quality software with a great user experience
- Be as capable searching for issues in fine details as you are at being strategic and big picture
- Stay up to date on the latest testing technology trends, and be able to evaluate which of them could work well for us
- Have a 'test to break' mindset, able to think of testing scenarios that other people will probably miss
- Be process oriented yet flexible, have excellent communication skills and enjoy working for a small business in a fast-paced, quick to adapt environment

To apply please send five bullet point reasons why you're the one, plus a one-page CV to emily@purplecubed.com
